

## Defibrillator checklist

In the UK, the NHS ambulance services attempt resuscitation in approximately 30,000 people each year. Bystander CPR and use of a defibrillator can increase the chances of survival by two to fourfold\*.

## We've put together a checklist to help you ensure your defibrillator is always ready for use.

Defibrillators self-test on a daily, weekly or monthly basis - so your device will signal, typically with a flashing light or audible alert, if there is a problem, for example, pads not correctly connected, or low battery.

1	

Set up a regular inspection procedure for your defibrillator

**Record your inspections below** 

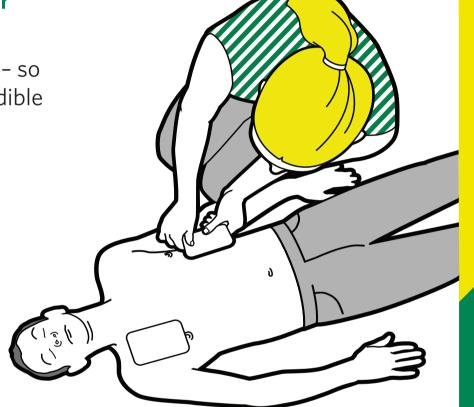

Record the expiration date of pads and **batteries** 

**Reorder batteries and pads** before they expire

Follow the guidance in your product manual when cleaning your defibrillator

Defibrillator ready to use?	Date	Initial

## Need new pads or batteries? Order now at sja.org.uk/shop or call 0344 770 4808†
